# Raegan Van Raamsdonk

+1 250-884-9015 | raeganvr7@gmail.com | GitHub | Victoria, BC

## Education

**University of Victoria** — Victoria, BC
*B.Sc. (Honours) in Computer Science, Minor in Mathematics* ***GPA 8.68/9*** — *Sept. 2023 – Present*

## Experience

**Leanpub** — Remote / Victoria, BC
*Full-Stack Developer (Co-op)* — *May 2025 – Dec. 2025*

- Shipped production features end-to-end across **React/Remix** and **Ruby on Rails/GraphQL** in a large codebase, contributing directly to the Leanpub V3 launch.
- Owned end-to-end storefront and account flows across mobile and desktop (header/nav, search, product pages, checkout/address, purchases, PayPal, read/take-course-online), ensuring strong UX, accessibility, and correct backend logic.
- Rebuilt the shopping cart from a standalone page into a site-wide drawer experience, improving cart edit speed and fixing a touch-device scrolling blocker late in the sprint to unblock shipping.
- Built/refactored **30+** pages and complex forms end-to-end (routing, validation, GraphQL mutations, and DB changes when needed), then traced and fixed related Rails model/mutation logic issues.
- Improved reliability through targeted refactors (library/purchases areas), proactive bug-fixing found during cleanup, and added/updated **RSpec** tests for models, mutations, types, and queries in high-impact flows.

**Don Mee Seafood Restaurant** — Victoria, BC
*Server/Host* — *2020 – Present*

- Sustained 6+ years of part-time work in a high-volume service environment alongside full-time study; trained new staff and supported operations during peak service.

## Projects

**AI Education Web App** | Demo Video *Next.js, Tailwind, Python, TensorFlow, FastAPI* 2025

- Undergraduate Directed Research Project (CSC 299, 99%) supervised by Prof. Anthony Estey; built an interactive platform teaching AI concepts to high school students.
- Designed and shipped a visual neural network builder with in-browser training feedback, powered by a Python/TensorFlow backend streaming model state to the Next.js frontend via SSE.

**Anchor** *Next.js 16, TypeScript, Supabase, Anthropic SDK, Resend* 2025

- Built at UVicHacks × Claude Hackathon (6-hour build, team of 4); biometric mental health companion monitoring HR/HRV to detect distress and trigger Claude-powered grounding conversations for psychiatric service dog waitlists.
- Owned DevOps and backend: provisioned Supabase schema (with pgSQL migrations), Vercel deployment pipeline, and GitHub repo from scratch to unblock the team within the first sprint.
- Overhauled the Garmin biometric data pipeline, ingestion, normalization, and distress-trigger detection algorithm, routing processed signals to the Anthropic SDK layer and logging episodes to Supabase.

## Technical Skills

**Front-End**: React, Remix, Next.js, JavaScript, HTML, CSS, Tailwind, Zod, Conform
**Back-End**: Ruby on Rails, GraphQL, Python, C, Java, TensorFlow, Keras
**Testing/Tooling**: Docker, RSpec, JUnit5, Git, Linux, Vercel, FastAPI

## Awards & Honors

**President's Entrance Scholarship**: Outstanding academic performance.
**Dean's Entrance Scholarship**: Top incoming students in the faculty.
**BC Achievement Scholarship**: Provincial scholarship awarded for high academic achievement in secondary education.
**Matthew Cowan Annual Scholarship**: One of one awarded to a promising student with high academic standing.
